As a part of the development of cryogenic technology, systematic experimentation at sub scale engine level is being carried out. Out of about 15 tests so far carried out, one test was unsuccessful during the evaluation of procedures for handling cryogenic fluids. After corrective actions, three successful ignition trials have been carried out.

(c) and (d) No, Sir. The arrest of two senior ISRO scientists, the investigation for alleged espionage and the resultant adverse publicity did initially affect the morale of ISRO scientists, engineers and staff. However, this did not delay the realisation of the planned programme of ISRO, including the cryogenic development. With the current level of progress in this complex technology, an ambitious goal of realising the indigenous engine in the time frame of 1999-2000 has been set.
